---

There was once-on-a-time an apprentice to a sorcerer - and in his master's absence he repeated a spell, whereby the mop and the broom began doing his work for him, and carrying in water. But then, he did not know the right charm to make them stop, and only the opportune return of the sorcerer prevented a watery disaster.

The radio commentator Martin Agronsky lately elaborated on this familiar story, taking the cue from some editorial page. So a propos is it to our present times and problems, that comments here might run on to a whole Round Robin-full, or a flood-disaster of words instead of water.

For, say that we are all apprentices, set to the learning of certain and uncertain facts, whether or not we are aware of our bonds and indentures - which likely we have all made for ourselves. But we are at least aware of work to be done, so our first problem is to learn ways of doing it. These ways, according to our notion, should be successful, pleasant, and easy. So we make brooms and mops, that is, machines, and these make other machines, and these sow and reap and gather and distribute for us. They also make weapons to protect what they produce, and to seize and keep what other people produce.

This is the first step in apprentice magic and comes from leaves out of very old books, and immemorial records, memories and experiences. It is a magic useful for immediate problems, for getting the sweeping and mopping done - a magic of beginnings, of 'starting things' without thinking of results, or that some day such 'things' might have to be stopped.

These fine magical startings are the stuff of history - laws, religions, institutions, governments, social systems. They are the lengthened shadows of men's thoughts. They are brooms and mops and aircraft and atobombs. They are our servants, but then they become automatons, robots, take on a kind of life of their own. They do what we set them to do at first, but next, we can't get on without them, can't stop them. They clean the house for us, but in the end will drown or destroy its indwellers.

More narrowly we can say that the sorcerer's apprentice is named Science - which has learned a few easy charms and spells out of the inexhaustible Book of the Universe. With these it has taught 'tricks' to the Elements - to Earth and Air, and Fire and Water. It began with a mop and progressed to the shattering of the atom - and now to things of even greater potency. And now is the time for the return of the Wizard, or wise Sorcerer who knows how to stop or change or redirect this hurry-down of destructive energies.

We say "science" - but of course it really himself whom man has to face - his own stupidity and childishness, which is at long last catching up with him. And who is the Sorcerer, if he exists at all? We think, Man himself again, but as his "Higher Self" clothed with wisdom.

Five times, say the Ancient Voices, human life on our planet has been blotted out. What is to be, will be! Let us do whatever useful common task lies next to our hands.

ML

## RADIESTHESIA

" At a time when the Government provides medical attention for every man, woman and child in Britain, it is of interest to observe that tens of thousands of people are turning from orthodox to unorthodox practitioners for treatment of illness. It is possible that one reason for this is that under present circumstances the general practitioner has little time to listen to and advise his patients, but the basic cause of this tremendous change is that medicine has tended to lose interest in the psyche of the patient, particularly at the present time, when current materialistic doctrines rarely allow for its existence.

" Radiesthesia involving the use of a pendulum instead of a divining rod for the diagnosis and treatment of diseases, may be said to have originated in 1806 when Gerboin, a French scientist, first conceived the idea of using a pendulum. During the following century the science developed mainly in France, and usually by the Catholic Clergy, who have always been at the forefront of scientific development in that country, possibly because, being unmarried, they had ample time on their hands for study and thought.

" Since the first World War, development has proceeded apace and the International Congress of Radionics was held in this country in 1950. It covered the whole field of the effect of radiations emitted or received by the human body. A wide range of specialised activities was demonstrated and also various types of machines designed to measure and calibrate human radiations.

" The basic factor of radiesthesia is the assumption that every living thing, whether starfish or human being, emits a steady stream of radiations. This miniature transmitting station has in man a maximum reach of some twenty-five to thirty feet, but is usually not noticed further than half this distance. There are three streams of radiations, one nearing the visible spectrum, which compose the aura or halo of the saints of old, one approaching audibility, and one on a shorter wavelength, which can be modulated by illness to a recognisable pattern, capable of demonstration on a cathode tube. \*

" The correct interpretation of these patterns, involves a high degree of technical skill only to be acquired after long and arduous training. In such cases the proportion of successful treatments is sufficiently high to justify many of the claims made for the new science. ly

(ATLANTIS, IV-3. Sept. 1951: Bi-monthly, Markham House Press, Ltd., 31 King's Road, Lon. S.W.3, Eng. Year \$2.00, single .40. Egerton Sykes, Ed. c. 5 x 7", 16 pp. The Editor of Atlantis is a BSR Associate.

(Also recommended, THE PENDULUM, a monthly review in radiesthesia; edited by F.A. Archdale & Egerton Sykes; specimen copy .40; address same as for "Atlantis", sup.).

Note:\* RR Editors and other BSR Associates do not necessarily concur in these alleged details, and more data is constantly coming to light, but students of radiesthesia will find these English publications well worth while. ML-

Associate Resh-Mem-Heh.

NOTES & COMMENTS on "PROJECT HERMES":

1) This circuit and other information was given to me via 'para-normal' means, by a technical source with whom I have been in contact at intervals for the past 4 or 5 years. Some of the information from this source has proven to be valuable, but --- caution --- much of the other information received proved to be worthless. Therefore, do not place too high a value on it, or assume its correctness, unless or until actual tests can be made.

2) The device is supposedly a reproduction of an ancient communication instrument - one form (there are several others) of what Dick Shaver called "telaug" in his writings. Its main use by the ancients was to communicate telepathically with others on the same 'here-living' plane. My informant says, however, that it can also be used to communicate with entities on other planes, if properly tuned. This particular form is very short range under ordinary circumstances. That is: its effect will influence only persons or entities in the immediate vicinity, when used singularly. If, however, two persons each have such a device, and the devices are tuned to each other, they will work over fairly long distances. The actual method of operation is to create a controlled vibrational field which will sensitize those within its influence. It may be noted that several persons have apparently been sensitized to telepathic contact by wild radiations from electric arcs, etc. Electric welders and old time spark-gap radio operators were usually regarded as a 'peculiar lot', and would frequently confess they got a 'lot of screwy udeas' while in the influence of the arc.

3) The original device was made of components which have no modern counterpart and could not be reproduced except in a large laboratory,

-----  
\* The ms. of Project Hermes comes to BSRA Hdqrs. from one of our most gifted Associates, and is submitted "for our information". Readers will note the discretion and reserve with which the author expresses himself. In fact, he advises against publication, lest in event experiments should come to nothing, the BSRA "might appear a bit ridiculous". But the BSRA publications are a clearing house for novel and may-be productive ideas in the field of Borderland research; their value can be determined only by experiment and cooperation - which in turn implies that they must be made known. The fact that we publish them implies nothing except that the BSR Director thinks them interesting and worth examination; and the author of the Hermes ms himself makes no other claims. He is, however, well known to many of our Associates, and his identity would command a respectful hearing for anything he has to offer.

-ML-

and at prohibitive cost. The effort during the past few years has, therefore, been to find commercially available components which would produce the same effect as the original. This has involved (on my part) the securing of technical characteristics on hundreds of electronic components, which my contact would check for the particular effect he wished to secure. (This explains the apparent familiarity of the communicator with our components.) The circuit finally evolved is one which he believes will produce essentially the same result as the original device. It must be emphasized, however, that my contact has no facilities for actual construction, and that he has evolved the circuit entirely from the theoretical point of view.

(4) Comment on actual circuit: Parts (1) and (4) are a conventional oscillator circuit. Parts (3), (7) and (8) would be a conventional radio-phone modulator circuit if (7) was a by-pass condenser, and (8) was a microphone. As it stands, it is over my head. Communicator is very insistent that nothing but a variable reluctance unit will work at (8). The (2), (5) and (6) set-up at the lower left is also over my head. I can not visualize what effect they would have. Note that the tube is connected so as to form a triode, but communicator insists that it is essential that the pentode be used, as all triodes which I told him about lacked the proper characteristics.

(5) I cannot guarantee to secure any further information which any may desire, as contact with my communicator is at his option, not mine. That is: I have no way of contacting him, but must wait until he decides to contact me.

Further information on "Project Hermes".

After receiving a recent letter from one of our Associates on the subject, I was again in contact with my communicator, and expressed the desire to have the matter checked from the viewpoint of someone on some other plane--preferably some electronics expert who had "passed over". Was told that he had devices by which he could "connect" with anyone I wished to contact, provided that person was willing and able to talk at that particular time. I suggested Nikola Tesla and, after a few moments delay, was told that he could and would discuss it for a short time. The following is, therefore, supposed to be a conversation with N. T., but I should like to warn that I have been frequently bothered by cases of impersonation in these matters, so it should not be taken at face value, but should be analyzed critically.

- (Q): Will this circuit which I have before me work? Will it do what is claimed for it?
- (NT): (After a slight delay) It is essentially correct. Quite crude, and capable of a great deal of refinement.
- (Q): Do you wish to suggest any changes? I would be pleased to make them.
- (NT): No. It would be difficult to make you understand, and still more difficult for you to accomplish with available facilities. It is very crude, but will do.
- (Q): I have here a letter from an Associate which postulates a beat-

note theory. Can you get its contents?

(NT): Yes. I can get anything which you have in your mind.

(Q): Is his hypothesis correct?

(NT): Yes and no. There is some heterodyning involved, but it is a direct communication device essentially.

(Q): I had always assumed that mental waves were far above radio range. If this is a direct communication device, then they must be in that range. Is that correct?

(NT): Yes. They are within the range of conventional radio apparatus, if they are sensitive enough, although a receiver would not detect it except as low-level "interference". They are not properly constructed to "translate" the thought waves.

(Q): Could you tell me the exact frequencies of these thought waves?

(NT): I must convert into terms which you will understand. (Several moments delay) Each individual has a frequency of his or her own, just as each radio station has its own frequency. Each plane, however, has a normal range, with individuals on that plane on some frequency within that range. Beginning at the lowest level, there is a group of demonic and elementary entities in the range of about 10 to 20 myriacycles. The lowest astral level begins at about 30, and continues upward to about 80 for the higher astrals. Those on the planetary etheria levels communicate on a range of about 70 to 90. You will note that there is a great deal of overlapping. In fact, there are no firmly fixed lines between levels. They just merge into one another. The thought waves of the embodied "here living" persons of your planet are within the range of about 10 to 40 myriacycles, with 20 being about the normal average. Thus you will note that there are many who, unfortunately, are in direct contact with the lower astrals. Many of them may be unaware of it, but are influenced by it. Most of your people are sensitive only to frequencies very near their own, but there are some (including the true mediums) who have the ability to tune their mental vibrations to higher or lower ranges at will.

(Q): I should think that radio and other apparatus would cause a lot of interference on other planes.

(NK): It does. Since the birth of your electronics age, there has been a terrific din here. Radio and television is no problem. Your F. C. C. can be influenced not to grant licenses for the particular frequencies which we know will disturb us. They do not realize it, but they are under constant watch and guidance from other planes. In the case of some other apparatus, the problem may be more difficult, and more direct and drastic action may be required at times. After a man has had his peace and quiet disturbed for about so long, he is going to go out and silence the source of it. He will usually be polite about it, if he can be, but By Gad sir, he intends to stop it regardless!

(Q): I didn't know that those on higher planes were subject to such human instincts and failings.

(NK): You know better than that. Don't forget that "higher" merely refers to vibrational levels, and not necessarily moral instincts: I would remind you that, when you first began to recall your life on Venus Etheria, the details were so much as they are on your present plane that it was a few years before you realized that it

was a few years before you realized that it was not on Venus Materia, as you first assumed. I have never been there, but I doubt that all was sweetness and peace.

- (Q): No. As I recall, there was a lot of variation between individuals. The general level seemed to be higher than here, but there was bad and good. They seemed to live and love and hate and hope just as those on any other plane. As you say, that fact confused me for a long time, although I was aware that Venus Materia was not ordinarily regarded as habitable by higher incarnates, and that life forms were on a rather low order there.
- (NK): That is my understanding. I have never been to either.
- (Q): However, they know of you there. I assume that you must be of Lemurian origin, to use the Earth designation, and I understand that they usually discarnate to Terra Etheria.
- (NK): That is correct. Some of us have visited your Etherian Nors there, but I have never happened to be one of those. If they know of me, it must be from contacts which I have made with them on Terra Materia at various times.
- (Q): I assume that that is it. At any rate, sir, you are highly regarded by my people. But to get back to "Project Hermes", which, as you perhaps know was so named because he was the messenger of the gods and this device can perhaps communicate with some of those whom the early Tellurians regarded as gods--
- (NK): The name is appropriate. One name is as good as another.
- (Q): The question I wished to ask, sir, was regarding the secrecy of the thing. My communicator fears that it could be misused if it should fall into the wrong hands, and could cause great harm. He therefore urges that it be restricted to only those of good will.
- (NK): That is impossible. Who is to judge who is of good will? How are you going to prevent leaks? No. If you get it developed, give it to the world, without reservations. Every new thing will cause some harm. That is the nature of new things. You have to take the bad along with the good. But, on the other hand, who is to say which part is bad and which part is good? That is all in the point of view. But I do not wish to get involved in a philosophical discussion of good and evil. That is not my forte. I have never considered that part of it in my work. We must do our job and let the chips fall where they may. I cannot spare any more time now, so good-bye.

-----

Note: \* and \*\* p. 3 of this article: The Mark P. Controls explained several years ago that certain regions of the etheric worlds were being seriously disturbed by the atobomb detonations, and have lately asserted that supersonic speeds were producing a similar effect -- and that the Etheric people might be compelled to take radical measures in self defense. The use of such speeds in warfare, to produce devastating concussions, may well precipitate an Etheric intervention. -- Increasing and inexplicable disasters to jet planes may possibly fit into this picture.

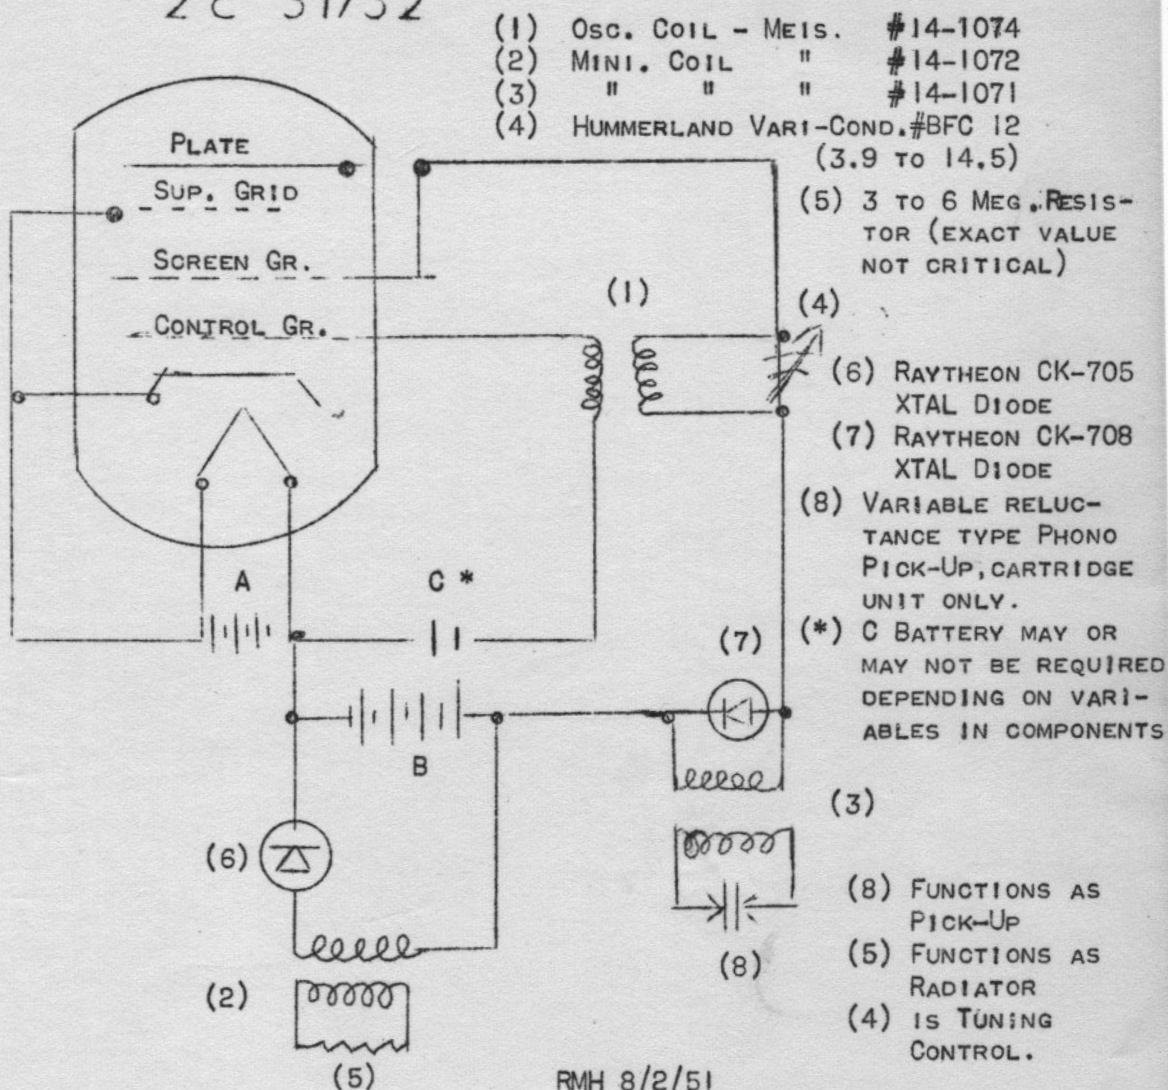

\*\*\* Just as the word pure to the occultist means unadulterated, so higher refers to waves, vibrations, or frequencies: neither word has any moral or religious connotation.

# "PROJECT HERMES"

(TOP SECRET)

\* "PROJECT HERMES": THIS MS COMES TO RR HQRS. FROM ONE OF OUR MOST GIFTED ASSOCIATES, AND IS SUBMITTED 'FOR OUR INFORMATION'.

READERS WILL NOTE THE COMPLETE DISCRETION AND RESERVE WITH WHICH THE AUTHOR EXPRESSES HIMSELF. IN FACT, HE ADVISES AGAINST PUBLICATION, LEST IN EVENT OF FAILURE, THE BSRA MIGHT APPEAR 'A BIT RIDICULOUS'. BUT THE BSRA PUBLICATIONS ARE A CLEARING-HOUSE FOR NOVEL AND MAY-BE PRODUCTIVE IDEAS IN BORDERLAND RESEARCH, AND THIS IMPLIES AT LEAST A LIMITED PUBLICITY.

This is the latest Bulletin to the Huna Research Associates, issued by Director Max Freedom Long (who is also Associate Director of the BSRA). Nearly every issue of these Bulletins contains matter of interest and importance to our own group, or at least to those who wish to follow up on some of the curious facts and problems we deal with. I have often wished I could present every BSR Associate with an annual paid-up subscription to the Bulletins. One does not need to be a devoted follower of the Huna teachings in order to profit by these publications.

This reminds me to make note, that all communications addressed to Max Freedom Long, F.H.F., P.O. Box 2867, Hollywood 28, Calif. - must be exactly that way, and NOT omit the "28". If you address him at "Los Angeles 28" be sure to add "Hollywood Station."

The Bulletin 65 contains several pages on the subject of "VITIC", on which the BSRA have published a booklet, and in which a number of our Associates are actively interested. It also described further experiments by Verne Cameron in detecting the presence of invisible (etheric?) forms by means of his water compass, originally devised as a dowsing instrument.

The results of these experiments are sensational (to those interested in such studies), as were also several very brief tests made here in San Diego at one of the Mark Probert meetings. We are now trying to arrange a series of more definitive tests in the detection of thought forms, created by several persons in the absence of Mr. Cameron. If these can be located and described by him, following the indications of the water compass, Verne Cameron, the Huna Associates, and our own B.R. Associates and helpers, will have at least written an opening sentence or two of one of the most important chapters of 'contemporary history'.

The BSR Director is also trying to put together a booklet on the development and achievements of the Cameron water compass, both as a water-finding device and with respect to its other extraordinary powers. The additional time and work required by this project have resulted in a smaller RR than usual (this issue); but our readers are considerate and we shall try to make it up to them, later on.

Recurring now to the VITIC: there are a number of points which seem important to mention, in view of the increasing interest in the subject.

1. The term "Vitic" appears to have been invented ca. 1914- '21 by one of the early investigators (Baines, White Robertson, J. Horne Wilson et cet.). It is applied to some kind of energy or force which appears to be stored in the nerve ganglia, by holding a permanent magnet in one hand and a piece of carbon in the other. The reality of this effect is believed to be proven by the increased deflection of the needle of an Edison galvanometer. It is also believed that this force was known to the ancients, particularly to the Egyptians; and the Mark Probert trance Control, the Yada di Shi'ite, has several

times asserted that it was well known in a very ancient Tibetan civilization also.

2. During the last 2-3 years a considerable amount of research work has been carried on, dealing with the effect of magnetic fields of all types on the human body, cell growth, diseased conditions etc. (Bibliography on request). The use of carbon does not seem to have been investigated in this connection - but future research may show that the magnetic effects mentioned are greatly enhanced by it.

3. The trance Controls insist that the effect of the C is to supply something analogous to a ground, that there is a magnetic current in - volved, or/and a current in the aura (which amounts to a magnetic field), and in the etheric body. The magnet appears to be the active element rather than the carbon; yet the field of the magnet does not "flow", but excites an auric or etheric flow.

4. It seems probable that the hardness of the C is less important than its purity (from metallic elements).

5. Some experimenters, especially Assoc. Sherman Peticolas (Metuchen, N.J., Box 224) believe that the size of the C stick and of the magnet greatly influence the result. This seems borne out by one experiment made by Max Freedom Long (Bul. 65 p.2). Assoc. S.P. also reports an appearance of light or auric radiation from around the hands, visible with only slight clairvoyance.

6. Associates please note: that no information is obtainable leading to any rule about size of magnets (or strength) and of C stick used. This can be determined only by careful experimentation in each case. It is probable that optimum sizes will vary with the individual.

7. Concerning the question as to which hand should hold the magnet, etc. The investigators mentioned in Para. 1 made some highly generalized statements about this. It seems to me doubtful whether further experimentation would bear these out. The Controls have said repeatedly that each case has to be studied by itself, that the carbon-magnet combination was highly beneficial to some persons but detrimental to others, and that sometimes the left hand should hold the magnet, and sometimes the right.

8. Since the BSRA are largely responsible for stirring up interest in this subject, I wish to emphasize the need for caution in personal experiments with the "Vitic" force - and for conservatism in announcing results. (A) No sensation is felt by the normal person, on holding the "pair" (B) Relief from nervous tension, and/or an influx of vitality are reported by many, after lapse of a little time (C) Autosuggestion is always likely to be operative. Where the results of suggestion are good, we should welcome it as much as any sugar-pill doctor - but it will vitiate the results, or the reports by confusing the factors. A few persons have reported insomnia - is this suggestion, or a result of the "Vitic" force?

9. It is my opinion that persons with weak hearts should not hold the magnet in the left hand. I also believe (and the Controls have confirmed) that persons in normal health may (and should) try changing magnet and C from one hand to the other occasionally. I earnestly recommend caution and moderation in experiments. The fact that no im-

mediate physical effects are noticed, and that doctors know nothing about this force (and probably don't want to, tho' it was a M.D. who started the investigations), and very little can be regarded as proven - these facts do not guarantee that Vitic is always harmless. I have used the "pair" for several years, myself, and believe the effects are beneficial; but these benefits, and my own methods of use, may not apply at all to another person. And there is no one to tell you just how and when to use the pair.

10. The Cameron water compass, if it performs according to its present promise, may give considerable information about the Vitic effects.

11. I hope that everybody who experiments with Vitic will inform himself thoroughly on all available data - even tho' he will not find directions for his personal use. And since this material has never been collated except in our own BSR booklet, this is one time when, willy-nilly, we tout our own wares. (18 pp., 7 x 10", \$1.00).

11. As a final note, and to avoid too much correspondence: you can get a carbon stick from any large size discarded dry cell. Any carbon stick from  $\frac{1}{2}$ " to 1" in dia. and about 4" long, will do (but the more free from mineral or metallic elements the better). Otherwise, carbon rods 1" x 12" can be obtained from the National Carbon Co. Rm. 1715 Clark Bldg., Pittsburgh 22, Penna. Cut into (say) 4" lengths with a hacksaw. Or try local dealers in electrical supplies. For the magnets, probably the Alnico bar magnets, 1 x 13 cm are best. Or the Alnico horseshoe magnet,  $1\frac{1}{2}$  x  $1\frac{1}{2}$ " will do. Try local hardware stores for this, also radio repair shops. .75-\$1.00.

12. Don't start off by holding the "pair" for several hours; make it ten minutes instead, and increase the time slowly up to not more than an hour, if it seems all right to do so. We are particularly interested in reports from experimenters using an Edison galvanometer: *less than 50 micro amper*

- (a) get the normal deflection first - without telling subject what you are trying to do.
- (b) Have subject hold the pair for five minutes. Note the deflection.
- (c) Do not continue with the same subject at that time. Get another person to try it. (Subject "1" is "charged").
- (d) Observe all obvious precautions (vs change of pressure on terminals, perspiration on hands etc.) If desired, use water contacts (connect terminals to electrodes in small beakers or other containers and immerse finger or thumb without touching electrode).
- (e) Tabulate the results (this process is much trickier than one might think. What is needed just now is complete verification of the reality of the Vitic effect, via the galvanometer).

-----  
13 Recurring briefly to Bulletin 65: Director Long quotes certain strictures on Huna practises and theory, made by a Communicator (not of the M.P. group). My own reaction is, that a "power-house" shut down is not destroyed or exhausted - and that Huna operations abundantly justify themselves by their results. Knowledge and power can be regained where desire and intelligent effort seek for them. But "all you will find on BOTH SIDES of the Veil is opinion" - to quote the Mark P. Controls.

ML

"OTHER WORLDS" - OR, WHO KNOWS WHAT? \*

The scientifiction magazine Other Worlds has recently published, in its October and December issues, a two-part article entitled "I Flew in a Flying Saucer," by "Captain A.V.G." The editors of Other Worlds have undoubtedly acquired a very considerable store of information, which is released (if one can call it that) in the usual scientifiction style - that is, as an inextricable tangle of facts, conjectures, and sheer imaginative invention.

The Air Force almost certainly has a huge accumulation of data and reports of all kinds, out of which they release such few items, mis-statements and soothing conjectures as serve their purpose - which appears to be misinformation of the public. Their record in this matter is one of uninterrupted mendacity.

Thus neither "source" is worth anything to the honest and critical investigator of these amazing phenomena, the visitation of the Flying Discs.

The Editors of Round Robin and other publications of the Borderland Sciences Research Associates have also a considerable accumulation of material, the substance of which has been offered the public without fictional distortions, concealment, or ulterior ends. We lack the facilities of a national magazine or a branch of the armed services, yet possess some slight advantages. We are not (as yet) muzzled by military policies, or dictated to by news-stand sales. Though we reach comparatively few people, they are people who want ungarnished facts and who can understand what we are talking about.

It is sour and disgraceful truth, that after some five years of this visitation by the Discs there is not a single publication, or news agency of any kind, which offers the public an honest and intelligent summary of the facts - or any explanation of them worth the paper it could be printed on. On our own behalf we shall at least say that we have tried to do this. And we have repeatedly pointed out the great variety of the phenomena involved makes it difficult to accept any simple and single explanation.

One advantage enjoyed by Round Robin readers is also, from another viewpoint, a very great difficulty. Since the fall of 1946 we have had sources of information of a peculiar sort. Your editor and all BSR Associates who have been able to investigate for themselves, have found these sources consistent and trustworthy. But to a great number of people they would seem incredible and fantastic. Interplane communication, to the groping mentality of our time, is a delusion or a fraud. And, "What good is a fact if no one accepts it, or an answer if no one believes it?"

It's not quite that bad, of course. There are some millions of people who can and would accept our sources of information. We have been able to reach a few of these, but that is about all we can do.

But now we read, in Other Worlds again, that in their next issue Kenneth Arnold is going to give "the true facts on the reality" of the Discs. Mr. Arnold has visited the BSRA Hdqrs. in San Diego, and we

\*We are indebted to BSR Associate Rev. Milton Nothdurft for calling our attention to these "OW!" articles. (ML)

esteem him highly. We understand, however, that at present he rejects our explanation of the Discs and the sources from which it is derived. Be that as it may, if he can really "give proof that those who deny them (the Discs) are lying" - as the announcement states- it will be a good deed in a stupid world. Yet since some millions of people already know that the authorities have been lying, some more responsible publication than the O.W. (OW!) magazine should publish his proofs. But of all this, more in our next issue.

Let us now refer briefly to some points in "I Flew in a Flying Saucer." "Part of this story is fictitious", says the Author's Note, but each fictitious character "has his or her living counterpart. Many of the events are actual occurrences. . . I have given (Editor Ray Palmer) permission to use my information as he sees fit... The saucers do exist. I know because I flew in one."

(This is the kind of double-talk, of course, which takes away with one hand whatever it offers with the other).

But if the story does nothing else, it lights a hot fire under the stupid and timorous authorities who could think of no recourse except to deny or suppress everything they could not understand.

There is a long section about a huge "space ship" which engulfed both Captain AVG and an aviator friend who had previously disappeared. Our own information indicate the possible existence of "mother ships" from which some of the Discs may issue, and to which they may return.

The friendly intent of the visitors also coincides with BSR information. So too, with various other items:

"These people have been around for a long time" . . .

"There can be more than one of a thing, and each one can still be the original . . .

"Mental conceptions are given reality. . . A thought is a real thing, composed of electrical energy, which is a quality of matter. This electronic form is the basis for the object. . .

"This ship is part of an expedition setting up a plan of action on earth... to do something to the earth's atmosphere ...

Pick-ups of earth people have often occurred...

Earth scientists have been unaware of the effect of atomic explosions on the weather...

The visible moon is really a reflection from the inner surface of the outer layer of the earth's atmosphere. The true moon is quite close to the earth, but (like a great number of other celestial bodies) is invisible to us...

The bomb explosions "punch holes in the stratosphere"... this results in floods, cold waves, earthquakes and storms...

This is enough to illustrate our point, tho' we could add many more items. If we were to take everything which has appeared in the BSR publications, add the many pages of comment by the M.P. Controls, and make a critical comparison with the OW magazine story - my guess is, about 50% of such statements as quoted above would be found in common. That leaves out, of course, all of the fiction-twaddle with which the OW! editor has decked out the story. And we have been able to offer our

Associates a mass of highly important relevant material derived from our own sources, and never published elsewhere. This includes not only the Controls, who evidently know far more about this matter than anyone now living on our plane, but the brilliant essays in super-physics of E.S. Schultz and John Hilliard, which have explored the problem of Disc propulsion within the atmosphere and the earth's gravitational field. We have under study at this moment information on this point, which may make the construction of small Discs for our earth uses, practicable and easy. New principles in physics are appearing, too extraordinary to relate - or for even our more adventurous scientists to "waste time on."

We build no expectations on these, however - simply because in a cultural sense the Dark Ages are still with us. There is much knowledge in the world which cannot be used, which probably will long lie dormant in laboratories and libraries, until the Time Spirit, the Zeitgeist brings it forth. Yet we recall the words of Egon Friedell (at the close of the second volume of his History of European Culture): 'The history of the coming century will be the story of the Light from the Other Side.'

So, the situation is for the most part an impossible tangle, for the public and the scientific world as well. When the blind lead the blind that is always the result. Thousands of people in all walks of life have aspects and pieces and glimmerings of the truth. These fragments do not fit into our thought patterns or the milieu of contemporary knowledge. There is no one to put them together - or if this were done, no name is great enough to command respect for such a synthesis. In its essentials, this is no new situation in the history of our race. What is to follow (fast and soon?) lies in the lap of the Gods, and no individual may control or alter it, in its major aspects.

What we can do, each of us for himself, is to watch, to listen, to learn, to keep an even mind, to reject all dogmatism and question all authority, to strive for detachment and the larger view, to help where we can, to learn that service is best, and fear the worst enemy of all.

A point we should have included - that the deadly game we have been playing with atomic energy has alarmed the other-world peoples. Round Robin asserted this, after Hieroshima. To the effects of atomic fission our informants have lately added those of sound - that is, of supersonic speeds, etheric concussion, and the mysterious time-lag in excess of anything our physics can account for. (This, I believe, OW! has not yet caught up with). If we Earthians cannot live at peace with one another, perhaps it will bolster our egos to know that we have frightened or at least annoyed the entire solar system. This last expression, by the way, includes more than sixty celestial bodies unseen by us, yet "suited for habitation by human-like beings." Primitives are usually left to themselves (save for the missionaries), until or unless they become trouble-makers; after that, to quote Tesla (revenant) - 'by gad, sir, it has to stop.'

We are making the earth uninhabitable, by ignorant use of atomic energy and of supersonic wave lengths - and by emotional excesses of hate, fear, greed, and cruelty. Emotion affects the ethers as power - fully as any physical force.

QUOTES & COMMENTS

Regional Director  
Don Green

Items sent us by BSR Director Green (Anaheim, Calif.) include: quote from Sta. Ana Register about wads of cotton on strings keeping out houseflies. Will some

Associate who has hundreds or thousands of flies handy puh-lease give this a good test-out? Old stuff, of course - but either not well known or no good; very useful if true. -- At Cartagena, Spain, a savage fighting bull allows seven-year-old Juanito to retrieve a ball from between his front feet -- and an Anaheim child "size of a leprechaun, rolls around joyfully in the midst of a gang-up of snarling dogs" - illustrations, of course, of a well-known "occult" teaching, seldom practised -- Thousands of lifeless birds litter the airport runways at Knoxville, Tenn., also at Nashville airport. Attributed to a powerful searchlight. But birds do not seek a bright light (says Assoc. Green), nor are they lured to destruction seeking warmth from a bright light while in migratory flight (or any other flight) --- Swarms of tiny frogs, 75 ft. x a half-mile of them, near Kalama, Wash. "Almost to a hop they have stayed off the highway", which is more than most humans will do, either afoot or on wheels. -- in Orange, Calif. a woman called a druggist three times and the police once, trying to get a prescription filled (3:00 to 4:10 a.m.); said that her name was that of an Orange resident who died several months ago, gave a non-existent address, then hung up -- and "did you see the article in Readers' Digest about the woman who got into a taxi and disappeared?"

Concerning the flying Discs, Assoc. Green sends us some 7-8 pages of notes, quotes and comments. He inclines to the opinion that the Discs are magnetically powered; it seems to be little realized that this hypothesis takes care of at least a half-dozen problems concerning the operation and behaviour of these craft. But let us keep in mind that we are here speaking of the disc-shaped craft only, not of other enormous constructions such as the supposed mother ships. There are craft afloat in and above our atmosphere that rival the fantastic space ships of Oahspe... And as we have so often said, it is quite true that the Discs at any rate come from "other planets", if we do NOT mean those bodies which are visible to us. This is almost all that we mean, when we insist on the "etheric" origin of these craft. The etheric worlds and planes are numberless; the magnificence of our visible star-filled heavens is as the turn of a child's kaleidoscope...

And the airplane as we know it has reached the limit of its size & complexity. The aircraft of the near future will be fuelless, or powered by magnetism, gravity or light (three aspects of the One). Transportation without fuel, alone would remake the industrial and social life of our world. Weapons using no ammunition, and efficient wireless transmission of power would do no less. The clues to all these are already in our hands (Tesla achieved the last named but he far outran his time); but the genius who announces and proves such claims signs his own death warrant, confronting with ruin the lords of industry who rule our world... Even at this hour the giant plane is outmoded; there are instruments which soon will be able to sweep all aircraft from the skies, as

a housewife brings down cobwebs with her broom. .. There are, moreover, the will and rights of our starry neighbors to be reckoned with. Our 'influence benign on planets pale' is not in all ways appreciated.

Fantastic  
Suggestion

Or perhaps we should have entitled this section: "Ye BSRA Director Goes Haywire." The world-wide interest in radiesthesia is taking some strange turns. The Pendulum is being used for everything (almost), and in many different forms. Not the first time it has happened. A few decades back many Europeans, French people particularly, scarcely dared wind the cat or put out the clock without first consulting le pendule. This fad, however, did much to establish basic principles. And then, as now, it tended to develop a certain sensitivity, or psychic responsiveness in many people. Just at present, and in our BOSRA clan especially, there is a very active interest in two special devices, the Wallace ZNO, and the Cameron water compass (originally designed for locating water).

Both these devices of course belong in the field of radiesthesia, and the results, which are often very striking, are due to a variety of factors. The instruments have certain qualities and advantages of their own, but they will not work by themselves, or unless they are held by an operator. Yet the operator will not 'work' by himself, either. His sensitivity and psychic responsiveness is brought into play by the device. His confidence in it is usually a powerful factor - but to assume that a few cheap phrases about autosuggestion and unconscious muscular control will dispose of the phenomena, is sheer stupidity. There are forces involved, as real as magnetism and light and gravity, which are independent of the experimenter's belief or disbelief. But these have to be tapped; a rapport has to be established with the mind-body energies of a human being.

It is well-known that there are 'sensitives' and 'dowsers' who get results without using any device at all. Some of them stretch out their arms and 'feel' what they are looking for; others simply know by a kind of intuitive conviction. But for every one of these there are hundreds who depend on rods or pendulums or equivalent devices, and who developed their powers by the use of them. It is these psychic variables that balk and disconcert geologists, hydrographers and their kind. The indifference and contempt sometimes displayed even by distinguished scientists, toward successful dowsing, is almost incredible.

It is my own opinion (but I believe that of many Associates also) that we shall have to stand firmly on this rock - that radiesthetic phenomena are of the Borderland, and involve both physics and ultra-physics, both magnetism and the ethers, and the energies (or action) of the human psyche on some sub- or unconscious level. We instance a single happening. When a forked rod (say, willow or olive wood) pulls against muscular resistance until the bark is broken, or the skin of the hands, and the motion itself lies along vectors which hands and arms can NOT exert in their given position - then just what sense remains in the phrase "unconscious muscular action?"

We shall not 'pause for a reply' - being mindful of the storied cat which with the patience of her kind, sat down to wait for the sea to dry up for her crossing. But the cat dried up first. - For countless

similar performances, observe the record of 'orthodox' science in the field of psychic research, for the last hundred years or so.

But now to return to the two dowsing devices mentioned, and particularly to the water compass - I am myself 9999 percent satisfied that this gadget not only finds things belonging to our visible and tangible world, but invisible and intangible as well. Etheric existents, I mean. Thought-forms, which are created by mind-energy out of etheric matter. Even invisible people (ghosties, I mean!) who happen to be functioning in etheric bodies.

This will take an enormous amount of proving - at least for many people, and IF one feels obliged to prove it to them. The diehards who don't believe in water dowsing (or telepathy or psychometry or - or) will never believe such nonsense as that. But, who cares? Our attitude is, collect evidence, present it, make it accessible, tell other people how to experiment for themselves; let the determined ignorant sink or swim according to their destiny. And about this uncanny performance of the water compass - it will not appear a priori impossible or even improbable, to anyone who is accustomed to think even in parapsychological terms, to say nothing of the most ancient esoteric wisdom. Once you begin to travel with the advance guard of contemporary thinking (beginning some thousands of years back), the water compass and its ways goes onto the list of certainties.\*

Our 'fantastic suggestion', then, is simply this, that Associates who are getting good results with any kind of dowsing device (careful and critical experimenters who are not fooling themselves) should try finding thought-forms and etheric radiations of various kinds. Two or three persons, in the absence of the experimenter, should visualize an object (say, a sphere) at a given spot in a room; hold the image in mind, bring in the dowser and let him try to find it. Repeat and repeat, but don't get too complicated. Telepathy has to be reckoned with, but that can be handled separately. Be careful of unconscious pointing, by the gaze or otherwise. Or let the dowser have the room to himself. Don't jump to conclusions. Tabulate the results. Allow for change and improvement, and for special adverse conditions. Your prime question is simply: Can a thought-form be located by means outside of normal cognition and perception? Is it a spacial existent and can it be detected by any means - any form of dowsing instrument, or without any instrument. Keep the mind free from denial and also from great expectation. Visualize passively and with quiet confidence. Work out your own technique and let us have any well-considered results, either pro or contra.

\* Determined sceptics are instinctively aware that they must discredit and deny the facts - for if these are admitted there is no normal scientific explanation for them. Or, if "subconscious muscular control" is considered adequate, still no one explains where the information comes from, or how muscles can operate against their own resistance. No, it is clear that the data themselves must be denied - as, also, in the case of the flying Discs.

ATTENTION OF  
ALL D.T.'s

(D.T. refers to Doubting Thomas, who is likely, before long, to think he has d.t.'s in the usual sense of that expression).

1. Quote from columnist Whitney Bolton (9-30-50). "You may or may not believe what Frank Scully has to say in Behind the Flying Saucers. I do, and indeed believed it before he wrote it. But what is astonishing to Scully and his publishers is that 85% of the mail resulting from the book is cogent, sane, orderly and informative. Of that 85% more than 48% is from scientists of repute. Another 10% is from citizens who don't quite believe in "flying saucers" but who think the President and the Air Force have had a contemptible attitude toward the American public regarding them. The final 5% runs about 3% outright scoffers and only 2% crackpots who make fancy claims to have invented them, piloted them etc. All that I can contribute is, that the Air Force will be in the dismal position of having to confess falsehood or woeful ignorance. . . ." (E.S.S.)

2. Times-Picayune, N.O., La. Oct. 13, '51: "Flying barrel" spotted in Ohio (over Lodi). C.L. George, retired railroad signal maintainer, heard a hissing noise, looked up and saw an object "shaped like a barrel, faster than anything I have ever seen. It was awful high. It made a right angle turn without slowing a bit and headed north. It wasn't a plane; I watch planes all the time and can identify most of them" (Mrs. I.S. D.)

3. (Editor turns "honest."). Long editorial in Nashville (Tenn.) Star, Sept. 12, 1951. Many people are fed up, says the editor, with Buck Rogers, Flash Gordon, Space Cadet and similar fantasy; nevertheless he sometimes has a "strange and creepy feeling" that such extravagances may be close to reality. Atomic weapons, nuclear powered subs, the H-bomb, new non-atomic weapons "beyond imagination", space platforms, and so forth, fifth and sixth, are getting his chiva. Then comes the "round object speeding 1000 miles an hour over New Jersey." This is the flying saucer back again (says the editor), and "the Star is not the least bit sure that such things are imaginary. The psychic suspicion will not down - to be perfectly honest". Thus the fine flower of rectitude, plus sproutings of commonsense, are likely to crop up anywhere, even in the daily press. (Mrs C.L.J.)

4. And a "flying ball" about 4 ft. in diameter landed and took off again, near Hogsburg, N.Y. However, this thing had a shaft and propeller, which rather takes it out of the "disc" category. Date 10-3-51. (E.S.S.)

5. The film, Day When the World Stood Still, is worth seeing for its spectacular flying Disc. The story itself is pretty thin gruel, but some half-dozen of the principal ideas involved (concerning the Disc visit) might have been (may have been?) lifted straight out of BSRA publications. If the audience only knew how true this one-tenth of the truth is, the A.F or somebody would have a panic as well as a film to suppress.

Correspondence:

R.E.B. to RR Ed.

ZNO experiments.

... 'As I told you in my last letter, I was "advised" to put the ZNO aside until January. But it occurred to me in the meantime to try experiments with make-shift substitutes, to see if I could get the same movements the ZNO makes, but without trying to get any information. Suppose a person were expert in the use of ZNO, needed it in an emergency but had none at hand. Could he use something else - and would it work? It works!

'I have now experimented with a slender bamboo cane about three feet long, thicker at one end. I held the thin end of this lightly between the tips of my first and second fingers, with the stick pointing downward so that it could move freely. The stick, not my hand, vibrated so strongly I could "see" the vibrations as a slightly bluish haze or aura running down its length. This aura seemed to stretch and become wider as the stick moved freely.'

Associate REB adds that she also tried out a pebble tied in the end of a large handkerchief, and a nail balanced horizontally at the end of a string. With the latter she was able to see the etheric counterparts. "The significance of these experiments seems to be interesting. ZNO of course is best, but one can't carry it around everywhere and substitutes might come in handy at times. It's intriguing to think, for instance, of the help that might be obtained by such means of one ever got lost in the woods. 'John B. Smith led back to civilization by a pebble tied in the corner of a handkerchief!' Wouldn't that be somethin', though? "

R.E.B.

(The use of some highly sensitive device seems necessary for most beginners, but many different methods may be employed as the power develops - and eventually, no physical device is needed at all. But the practical value of a simple and dependable form of psychism would be considerable - if it did no. more than reply truthfully to 'is X telling the truth?' - 'shall I take this medicine?' - will my friend be at home?' - or even, 'which way is north?')

"Disc" anecdote:

Assoc. Rona Morris

Workman, (Ore.)

'When I was about 3 $\frac{1}{2}$  we moved to Oklahoma with two covered wagons...and on the way stopped to camp somewhere in Missouri, and an old man came by and stopped to chat with my father.

This old man said that about 40 years before, when he was just a lad and hunting in the hills, he saw a "round sort of thing" settle down from the sky on the bare top of the mountain above him. He was scared but so curious that he scrambled up to the clearing and stood looking at the strange object. It looked "kinda like a big silver ball", and presently a piece of it slid back and two people came out. To use my father's quote of what the old man said: "They weren't so tall as me but wuz nice-lookin' folks. Weren't wearin' much of anything in the way of clothes and the gal shore was purty." He said they tried to talk with him but he could not understand anything they said, nor, apparently, could they understand his few (and probably scared)

attempts to reply. Then finally they stepped back into the ball, the panel slid shut, and the ball slid up into the sky until it was lost to his sight. He said, "I'm a-tellin the truth but folks around here have always called me crazy and I suppose you will too." Of course, my father always did, but now I rather wonder if the old man was not less crazy than a lot of folks nowadays."

(Many and many are the tales of these visiting craft - yet if a covey of them came to roost on the Pentagon building, curfew to cock-crow every night, not a single Brass-Beak would admit hearing even a rumour about it.) \*

Assoc.W.M.L.  
Nashville);  
Electronic  
Med.Founda -  
tion

"The Electronic Medical Foundation in San Francisco is headed up by Dr. Fred. Hart, who has done some outstanding work in medical and disease analysis thru the use of radiation from the blood, and has effected some good cures thru short wave oscillators used or or less as a heating pad... Of course, the

A.M.A. throws rocks at him and at the Foundation constantly, and will do everything they possibly can to put them out of business... They did their early experimental work on cattle, and I definitely know from my personal contact with it, that remarkable information can be obtained purely from blood radiation and without any knowledge of the history of the person or animal from which the blood was taken."

(Assoc. WML is a highly responsible business man who also knows his way around in the complex field of electronics; we are glad to print his statement, since we have often recommended the Electronic Medical Digest (for its material bearing on Borderland problems) - and also because it sometimes happens that casual visitors to the EMD office are greeted with considerable reserve - one of them might have an AMA blacklist in one pocket and a hand-grenade in another. (That's not all a joke, since the AMA probably kills more people than all the (other) diseases of our time put together).

(This comment by Assoc. WML came to us in connection with the recent trial and conviction (on a technicality) of Dr. Ruth Drown of Los Angeles, whose work involves diagnosis by means of a drop of blood. \*\* An article by her appears in Round Robin vii-3 (last issue). We understand that she has a immense accumulation of evidence covering many years of successful practise; also, the principle of diagnosis from blood droplets is fast gaining recognition in medical circles. But the charges brought against her and the language employed by the press in reporting the trial, display the most hopeless ignorance and pre-judice. But so it is, has been, and probably ever shall be, short of some cosmic besom against cobwebs and dark corners and the spinners of lies that inhabit them. \*\*\*

---

\* Assoc. Rona Workman can be addressed at 420-7th Ave., Sweet Home, Oregon; she would be glad to hear from other Associates. And any contributor or Associate mentioned in RR can be reached, "C/o BSRA Hdqrs."

\*\* Dr. Ruth B Drown, 1517 No. Gardner Ave., Hollywood, Calif. GL 7158.

\*\*\* The most charitable comparison we can think of for describing the AMA tactics and their colossal swindle of the American public.

THE KOCH TREATMENT

COSTS OF THE TREATMENT:

(Extract from a letter by a prominent Los Angeles physician and surgeon, to RR Editor):

...."We have been doing a great deal of research with the Koch Treatment and we feel that it is very much more effective than ever before. Due to many years of going "into the red", so to speak, on this treatment it has been necessary for us to stabilize our fees so that we can at least make a small profit. Our charges for complete examination, laboratory tests, six months office visits, and all supplementary treatment, as well as all Koch injections needed during the six months period, is \$300.00 for the average case.\*

"The same thing for cancer is \$1000.00, and we take these cases on a 12 months basis, as it is impossible to get them well in less time than this. We usually require a one-third down payment, and the balance to be paid in monthly installments, if desired. Our results have been much better here of late and we are very busy - in fact busy enough to hire an associate to help with the treatment..."

Cordially - etc.

NOTE \* Concerning 1st paragraph above:

We take this \$300 fee to refer to allergies, infections, and all diseases except cancer which can be successfully treated by the Koch therapy. This will include asthma, hay fever, eczema, psoriasis, urticaria, fistula, bronchitis, malaria, pneumonia, poliomyelitis, malaria, rheumatic fever, tuberculosis, syphilis, undulant fever -- cataract, colitis, coronary heart disease, Hodgkins disease, rheumatism, ulcers, tumors and other so-called incurable conditions, (RR Editor)

Quote from Koch Treatment pamphlet, same author. "We wish to make plain that not all of the patients treated with Koch catalysts have recovered. However we have obtained a high percentage of recoveries, and the most outstanding recoveries were effected in extra-cooperative patients. "

(These 27-page pamphlets will be sent without charge to persons seriously interested in investigating the Koch cancer therapy, and are also sent out along with the Koch Treatment booklet issued by the BSRA (reprint from Round Robin), @ \$1.00).

Quote from Dr. W.G. Hendricks of Hollywood: "I have personally treated over 3000 patients with the Koch catalysts and I consider the Koch treatment the "outstanding medical discovery of the age".

... I wish to pay honor to Dr. William Frederick Koch ... who made it possible for me to restore complete health to my father, who at the age of 60 was dying of pulmonary tuberculosis... Time and again I have witnessed miracles beyond imagination performed with the Koch treatment, and to those poor unfortunates who are "too blind to see the truth" I can only offer my profound sympathy."

*1725 Avon Ave.*

# THINGS LEFT OUT

of this issue of Round Robin, only because we can't get them in till next time:

Back to the Future with Solar Power - by Mrs H.M. Graham, BSRA.  
"Not atomic power but solar power will be the energy of the future."

Notes on the Quantum Theory & "brain waves"-- Assoc. J.A. Hilliard.  
The Critic Criticised: (RR Ed. wrote about dowsing, our London Assoc. AUBER found "many inaccuracies", now S.A. Assoc. R.N. White says "he made a few mistakes himself", and "yields to temptation" to point them out).

Assoc. Rona Workman and the deceased pussy (very much alive). (RR. Ed. had a similar experience).

Notes on the Body Aura (involving the carbon-magnet combination) - Assoc. V.L. (We're trying to prepare a booklet on VLC and his water compass - one reason for a small-size RR this time).

Other Directions of Borderland Research. Asson. John A. Hilliard.

A Strange Pendulum Experiment. By Richard White, HRA & BSRA ( this was printed in Max Long's Bul. 62, pg. 4. Better to subscribe to these Huna Bulletins; if we reprint all the interesting stuff they include, RR will be Huna Buls. and nothing else).

My Brush with the Etherians (or whatever): by Assoc. Delbert S. Peirce. (Assoc. Peirce remarks "I believe there are at least a million people in the U.S. who would be good Associates if they knew about it" - and encloses a check for gift subscriptions - all of which makes RR feel happy and important).

Associate Lamb Sees Things. (So do a lot of other people, but Assoc. Lamb has the nerve to tell about 'em).

Another fine book from the facile pen of Dr. Nandor Fodor: "New Approaches to Dream Interpretation: The Citadel Press, N.Y., 1951. 365 pp. \$5.00. More information about this, next issue.

Entertaining anecdote from Assoc. George (ZNO) Wallace (mules and mule-thief, ZNO and the Indian). We'll print his address again - Box 158 Beaumont, Calif. - and the ZNO sells for \$3.50.

-- and other-andother items and articles equally good --

For your information - the Cameron water compass is not yet for sale, but Assoc. Cameron is trying to prepare a few of them for immediate needs. We personally assure our readers, this is not a profit - making scheme - and the instrument appears to be of great importance in dowsing, radiesthesia, Borderland research generally. Mr. Cameron's address is Box S-218 Grand Ave., Elsinore, Calif.

THE AQUARIAN PATH - "A monthly journal devoted to the study of esoteric philosophy and the ancient mysteries. Editor, F. Clive-Ross. Staple House 51, Chancery Lane, London, W.C.2. 35 pp. The July issue includes: Sex & Religion - The Mysterious Count - Cancer: the Crab or Scarab - Questions & Answers - A Neurotic Ass - Astrology by Interview, & News from the Astrological World - Book Reviews - Occult Glossary. Single, one shilling: per annum 13/6d ( \$2.00).

ATLANTIS - A Journal of Research: Official Organ of the Research Center Group. Egerton Sykes, Editor. 9 Markham Square, S.W. 3, Lon. 20 pp. May '51 issue contains: Editorials - To & Fro Before Columbus - Egyptian Place Names - Encke's Comet - Book Reviews. One year, 6 issues, \$2.00.

Readers interested in Dowsing, Radiesthesia, Interplanetary Communication, Atlantean Research and related studies should send to Markham House Press, Ltd., 31 King's Road, Lon. S.W.3, for lists of new and 2nd-hand books on subject preferred. Three titles are: Elementary Radiesthesia (.50): Blavatsky & Hoerbiger (.40): Quick & Free Healing (pendulums) (.20). THE PENDULUM is a monthly review of Radiesthesia (single .40), same pub.

FOREIGN PUBLICATIONS as well as any in the USA, in the general field of psychism, spiritualism, and occultism, may be ordered thru BOBBITT AGENCY, 1609 - 10th Ave. No. Nashville 8, Tenn. Ask the Agency for information.

HOLLOWAY SCHOOL OF PHILOSOPHY: 1123 No. Ardmore Ave., Hollywood 29, Calif. Dr. Gilbert N. Holloway, Dean & Founder. The publications and instruction of this School seem to me eminently sane and practical, and much superior to most offerings of this kind. It is non-profit, incorporated, and supported by voluntary contributions. Dr. Holloway has investigated the BSRA and the Mark Probert mediumship, and is well known to us here at BR Hdqrs. Ask him for the special folder describing the work of the School, issued during September, '51. (ML)

#### NAMES AND ADDRESSES

A number of our Associates live in small communities, or in an environment where there seem to be no congenial contacts - no one else interested in the BSR subject-matter. If you care to correspond with other Associates, we shall be glad to print (at your request) your name and address (or initials and address - Box no., Gen. Del. etc., as you prefer). Be sure to give the exact form of address you wish used.

With reference to items of personal experience, anecdotes and similar material included with correspondence - if these are NOT to be used in print, please make a notation to that effect.

To save time and work here in the office, we shall print names and addresses of contributors UNLESS otherwise instructed. -- As to CLIPS - we want them, read them carefully, and file them for possible future use if not used promptly; but we often fail to acknowledge them personally.

- : Mrs. Irene Carr, 2306 - 24th Ave. No., Seattle, Wash. :
- : Mrs. Rona Morris Workman - 420 7th Ave., Sweet Home, Ore. :
- : Mrs. Sylvia M. Weaver, RFD 2, c/ Dukes Rest Home, Jamestown, Ohio: (will welcome correspondence)

BOOKLET IN PREPARATION:

We here break our rule of never announcing a publication until it is actually ready for distribution - but circumstances are exceptional. This booklet will deal with the Cameron "water compass" and its extraordinary performances, not only in locating water, but in picking out a "charged" or "magnetized" object, and even projected thought-forms. The importance of this needs no emphasis on our part. Apart from the booklet about the Ether Ships (Discs), it is the most important thing we have ever published. About 70 pp., neatly bound. Price to be \$3.00 - but you can have a reading copy (keep it and send the \$3.00, or return with 10¢ postage). Do NOT send money now - only your order. We hope to have it ready about January 1st, '52 - BUT, of the making of books there may be an end by that time.

REPRINT OF "THE METATRON THEORY" by JOHN A. HILLIARD. A new and attractive issue, with foreword by the author and by Max Freedom Long. Ready Nov. 20. HUNA students please note, as well as our BSR Associates. \$2.00.

THE CAMERON WATER COMPASS - referred to in announcement above. Mr. Cameron is making a few of these, to take care of the more urgent demands. Each one has to be hand-made, there are increased costs, priorities on metals etc. to contend with; hence, the price of \$12.50. Mr. Cameron is preparing an instruction sheet. Not everyone can get immediate results with this device, and such "claims" as are made for it are carefully specified. But we recommend it for serious and patient investigation. If you wish to order one, send the order, with check, to V.L. Cameron, BOX S-218, GRAND AVE., ELSINORE, CALIF. If you are dissatisfied, after careful experiments, and will return the "Compass" in good condition, within one month after its receipt, the purchase price (minus postage) will be refunded. This refund offer applies to orders filled up to the end of January, 1952 - after which it may be extended or cancelled.

NOTE CONCERNING THE BSR FOUNDATION: The Secretary-Treasurer, Harriet P. Foster, will be absent from the city for several weeks. Your BSRA Director will act for her, pro tem. Checks for the research work of the Foundation should be made payable to MEADE LAYNE, SEC.-TREAS. PRO-TEM., BSR FOUNDATION, and sent to BSRA Hdqrs., 3524 Adams Ave., San Diego 16.

COLOPHON or CAUDAL APPENDAGE to RR VII-4 -- and which perhaps should not be printed at all:

Our next issue, if any, will appear after Christmas, about January 1st, 1952. That "if any" refers to contingencies of man and nature (events most liable but not certain). More imminent than war (according to all our sources) is an immense catastrophe resulting from the continued release of atomic energies. Involved in this is (1) the distortion of etheric stresses or pressure lines (gravity). Every

(Further description of these items on request)

BSRA 1.	Experiments of Morley-Martin & Dr. C.W. Littlefield .. . . .	\$1.50
BSRA 3.	The Koch Treatment for Cancer & Allied Allergies .. . . .	\$1.00
BSRA 5.	"VITIC" - Physiological Effects of Carbon & Magnet (New Printing)	\$1.50
BSRA 6.	MEDIUMS & MEDIUMSHIP (now being reprinted) .. . . .	\$1.50
BSRA 7.	The METATRON THEORY by John Hilliard, BSRA. (improved Reprint)	\$2.00
BSRA 9.	Letters to a Soldier .. . . .	\$1.00
BSRA 12.	Previsional Atomic Research by Edw. S. Schultz, BSRA .. . . .	\$1.00
BSRA 13.	The ETHERSHIP MYSTERY & ITS SOLUTION ("Flying Discs") .. . . .	\$1.50
BSRA 14.	Memoranda of the Mark Probert Seances, Nos. I to XII .. . Each	\$1.50
	The following issues now on hand: Nos. 104-7-9-10-11-12-13.	
	Nos. temporarily OUT OF STOCK: 2-3-5-6-8.	
BSRA 15.	TRANSCRIPTS of the Mark Probert Seances. By subscription: 10 to 12 issues per year; 5 or 6 in 6 months. Per Year	\$5.00
BSRA 16.	Project Survival-and-Service .. . . .	\$1.00
BSRA 17.	THE MAGIC BAG. Part I temporarily out of print; Part II is being printed. The BSRA does not print these, but we are advised that they will appear toward the end of February 1952. Part I, \$2. Part II ...	\$3.00
BSRA 18.	THE ROUND ROBIN - Bi-monthly. Subscription included with the BSRA membership, as are also various Releases and Bulletins. Singles ... 50¢---per year	\$5.00

INSPECTION COPIES of any of the above, except the Magic Bag, may be had on request.

All items are mimeographed and are written or compiled by Meade Layne, M.A., BSRA Director, except where otherwise indicated.

BSRA 19.	Addendum: Excerpts from the Mark P. Seances. Nos I & II available. These replace Nos. 14 & 15 of the MEMORANDA (item 14, above) Each	\$1.50

For loose-leaf items and reprints of articles, your enquiries are welcome.

IN PREPARATION: THE AURAMETER -- a new instrument in the field of Radiesthesia  
by Verne Cameron.. Ready about February 25, 1952 Price \$3.00

## CANCER RESEARCH EXPOSE

(We quote below the opening portions of an article, running to twelve columns, printed in the May issue (Vol. II No.7) of EXPOSE, a monthly news sheet published at 55 West 42nd St., New York 36, N.Y. Single copies .25 -- 11 issues \$2.00 -- 21 issues \$3.00. While EXPOSE does not include the KOCH TREATMENT in its survey, we nevertheless recommend the article and hope that BSR Associates will read it and send a few copies to friends. The length of the article precludes our reproducing the whole of it).

. . . " More than 200,000 Americans are expected to die of cancer this year. Many of these people might be cured - as hundreds of others have been cured - by men who believe they have found ways to cure cancer.

These men, with varying theories and systems, have given new hope and eventual good health to hundreds who were told by "competent" medical authorities that their cases were hopeless.

Have the claims of these men been examined? Have their patients been examined? Has an evaluation been made of the claims? - No.

Have the achievements of these men been welcomed by the medical hierarchy? - Not at all. Rather, the men have been hounded and harrassed. Magazine editors have been threatened with dire reprisals if their stories are told.

Who has done the hounding and the threatening?

The foremost enemy of all men who can demonstrate practical progress against cancer is the American Medical Association.

Dr. G. H. Earp-Thomas has charged that "Cancer is the most profitable disease that members of the A.M.A. have." Of much help to the A.M.A. in its determination to resist progress against cancer are the American Cancer Society and the Damon Runyon Fund. Both organizations promote a planned campaign that is often deliberately deceptive. (Details will be described in this article.)

But the real vultures in the cancer business are the surgeons who call cancer a "surgical disease" (N.Y. Times, 12/4/52), and who pretend that surgery will "cure" cancer.

More than twenty years ago, a man considered then by many to be the American authority on cancer, L. Duncan Bulkley, was senior surgeon of the New York Skin and Cancer Hospital. Dr. Bulkley announced with a candor uncommon among surgeons that, "Cancer is not a surgical disease. Neither surgery nor x-ray nor radium have changed in any way whatever the ultimate mortality of cancer in forty years. It was 90% in 1884. Now it is 92%."

At that time, a Professor of Medicine at the University of Michigan wrote: "I can corroborate Dr. Bulkley's declaration, for in a practice of nearly forty-five years I have yet to see a single case of cancer, save a few semi-malignant epitheliomata, that has been cured by these measures, and my experience has been in European & American hospitals." -Twenty years later, how have things changed? - Testifying before a Senate Committee in 1946, Dr. Geo. Miley of Hahnemann Med. Coll. & Hosp., in Phila., quoted Dr. S. Reimann of Phila. as saying that he had made a survey of cancer cases in Penna. over a long period of time, and that he had found those who received no treatment lived longer than those who had received surgery, radium, or x-ray." .....

The foremost enemy of all men who can demonstrate practical progress against cancer is the American Medical Association.
